PREFACE

Acknowledgement is given to the Office of Agricultural Development, South Dakota Department of State Development for funding this issue of South Dakota Agricultural Statistics.

This bulletin presents state and county crop data, state price/income data for 1982 and state livestock data for January 1, 1983. No county livestock data is available since those state funds were cut. For earlier year's county crop data refer to South Dakota Agricultural Statistics 81/82 and Historic Estimates 1976-80.

All current data in this bulletin is preliminary and subject to revision the following year and also after review of the United States Census data each five years.

Acknowledgement is given to the many South Dakota farmers, ranchers, and merchants as well as numerous commercial, educational, and government agencies who have voluntarily contributed basic information used in compilation of these data. Preparation of this publication was done by the staff of the South Dakota Crop and Livestock Reporting Service.

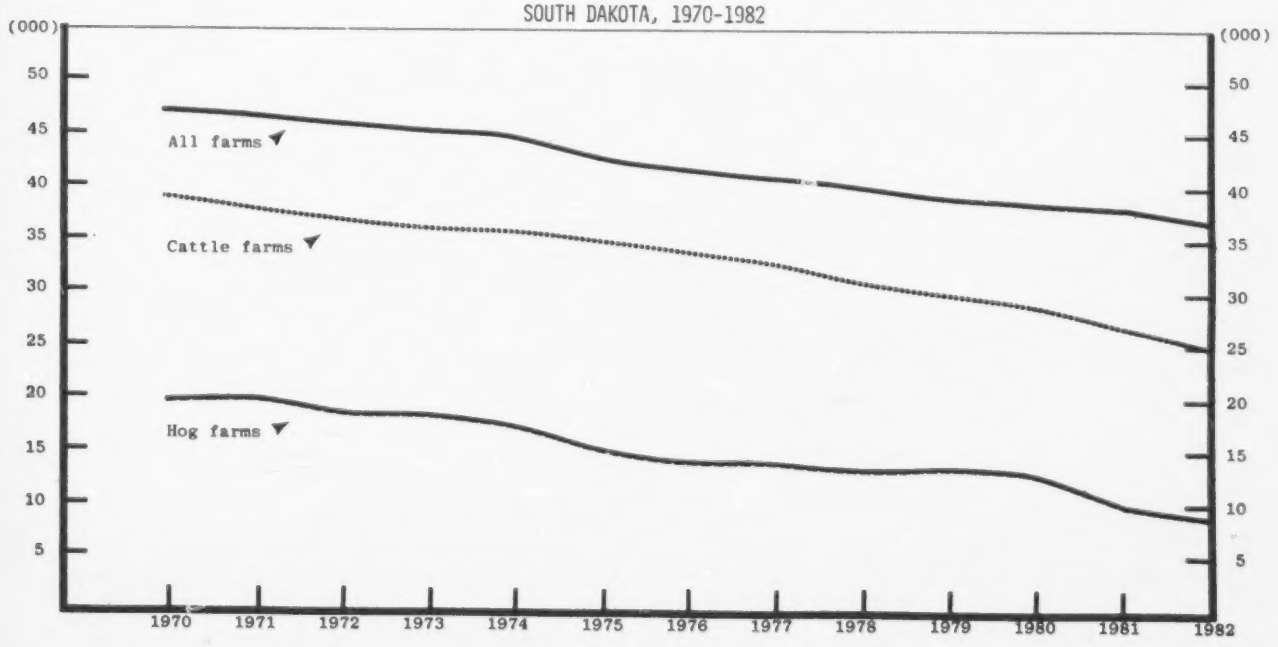
SOUTH DAKOTA, 1970-1982



WEATHER-CROP SUMMARY

GENERAL: South Dakota's 1982 weather started with a cold January. Sub-zero temperatures were common with wind chills reaching 80 to 90 degrees below zero. Some farmers and ranchers found themselves short of feed due to the harsh weather. A wet spring kept farmers out of the fields until late April and early May causing many late planted crops. Cool temperatures also kept fields from drying out and slowed the growth of crops that had been planted. Hot weather in early July damaged emerging spring wheat heads in some northern areas. The Northeast started to dry out in July and received little moisture until late August. Parts of the North Central and Northwest experienced drought conditions which lowered grain yields and test weights. Stock dams and ponds were full most of the summer except in the northern areas. The small grain harvest started about two weeks later than usual but finished close to normal completion dates. Row crop maturity was still about one week behind normal in September and many were worried about an early frost. Cool, wet weather slowed the row crop harvest for much of October and November but few row crop acres received frost damage. High grain moisture and wet fields kept the harvest at a slow pace until early November. A snowstorm in mid-November stopped harvest activities and caused light to moderate damage to unharvested soybean fields. Harvest was slow until the cold spell in late November allowed farmers to get back in the fields. There was more corn than usual that did not get harvested and stood in the field over the winter. Storage space was a problem in some areas so some grain was temporarily piled on the ground.

January: Cold weather ruled January with sub-zero temperatures and high winds, causing the wind chill factor to drop 80 to 90 degrees below zero. Snowfall was heavy over much of the eastern half, and blowing snow caused hazardous conditions for livestock producers. Precipitation amounts were normal or above normal for January.

February: Temperatures remained below normal for the first part of February but readings rose to normal by the end of the month. Only the north central and central areas received significant precipitation. The remainder of the State had below normal precipitation.

March: Temperatures started cold, warmed to above normal during the middle of the month, then turned cold at the end of the month. Precipitation was heavy in most areas. One storm dropped up to 20 inches of snow in parts of the northern half in late March. Over 3 inches of precipitation fell in the North from this storm while most areas received over an inch.

April: Warm weather started out the month but quickly changed as a storm brought cold temperatures, rain, hail, and snow the first weekend. Up to 14 inches of snow and total precipitation of up to three inches were reported in the West. Temperatures gradually warmed up the rest of the month. Field work was started in most areas by the end of the month. Only about 20 percent of the spring grains had been seeded by the end of April, well behind the normal of over 50 percent by this date.

May: Weather remained cooperative the first couple of weeks; however, topsoil moisture supplies were soon short over much of the State. The last half of May was very wet. An average of only 5 days was suitable for field work during this time. Spring grains were over 95 percent seeded by the end of May, so the rain was very beneficial but row crop plantings were delayed. Corn acreage was 55 percent planted by the end of May, whereas 82 percent is normal. Soybean planting had not quite reached the one quarter mark by month's end, compared to the normal two-thirds.

June: Field work was held up by damp weather and wet fields the first week, but progress resumed as fields began to dry up the second week. Tan leaf spot showed up in some wheat fields but cleared up as fields dried out. Topsoil moisture supplies were surplus over much of the South and adequate in the North at the start of June. By the end of the month parts of the Northeast were critically short of topsoil moisture and most of the Northwest and East were short. Crop maturity was one to two weeks behind normal but most crops were in good condition. Range and pastures were in good to excellent condition throughout the State. Some pastures had double their normal carrying capacity.

July: High temperatures the first weekend damaged newly emerged spring wheat heads in northern parts of the State. Topsoil moisture supplies shrank in most areas in early July, especially in the Northeast. Small grain harvest started about two weeks behind normal. Winter wheat was 38 percent harvested by the end of July, whereas 82 percent is normal. Maturity of spring seeded small grains trailed the normal rate by about 30 percent.

August: Dry weather was the rule for August which allowed the small grain harvest to catch up. Virtually, all the small grains were harvested by the end of the month. The dry weather, however, further depleted topsoil moisture. Much of the northern third of the State was critically short of topsoil moisture; the central third was short; while most of the south had adequate moisture. Grasshoppers became a problem in parts of the North Central and Northwest during August and caused some damage to small grains.

September: Moisture supplies in the North remained critically short or short for much of the month. Row crop yields suffered from the drouth, especially in the north central counties. The remainder of the State received adequate moisture for crop development with the exception of a few scattered areas. Row crop maturity was about one week behind normal. Soybean harvest was just getting started at the end of the month while cutting corn for silage was just over half done. Grasshoppers were making problems in central winter wheat fields causing some fields to be sprayed. South central winter wheat fields were being sprayed for greenbugs.

October: Weather was the biggest threat to row crops in October. An early snow the second week of October was followed by cool temperatures and another snowstorm in late October. The last storm dumped up to 10 inches in the Southeast and damaged some of the soybean crop. The damage was remarkably light in most areas.

November: Fields were drying out which allowed some harvesting the first couple of weeks. Very few whole fields could be harvested due to wet spots. High grain moisture was also a problem causing more to be artifically dried or left in the field. Storage was also a problem in some areas. Another snowstorm covered the east central counties in mid-November halting the harvest. Soybeans were the most susceptible to damage but were 93 percent harvested at the time. Most farmers were not able to get back into the fields until late in the month when the ground was frozen solid to support harvesting equipment. By the end of November only 75 percent of the corn for grain had been harvested, while grain sorghum was 91% harvested, and soybeans and sunflowers were both over 95 percent harvested. More corn than usual stood in the field over the winter.

December: Temperatures fluctuated up and down throughout the month. Precipitation was light until the last week when up to 14 inches of snow fell on the Southeast. The mild weather, up to the last week, allowed the corn harvest to continue longer than normal.

CROP PRODUCTION

SOUTH DAKOTA

Production of most major crops in South Dakota increased in 1982 over 1981 levels. Only grain sorghum and durum wheat production were lower in 1982 than in 1981. All wheat production increased 12 percent over 1981's record large production. Winter wheat production jumped 23 percent and other spring wheat production rose 11 percent while durum production dropped 39 percent. Winter wheat and other spring wheat productions were at record levels. Corn for grain production, up 7 percent from 1981, was the second largest on record. Oat production was 90 percent above the 1981 crop. Increased plantings and a record yield contributed to the large increase. Barley production was up 17 percent. Rye production jumped 45 percent while flaxseed production rose 48 percent. Sunflower production was 40 percent above the 1981 crop. Production of soybeans and all hay also set new record highs. Soybean production was 15 percent above last year while all hay production was up nearly one-half. Grain sorghum production decreased 12 percent due to fewer acres harvested for grain.

Crop yields increased during 1982 over the previous year for all major crops except sunflowers. Several small grain crops set record high yields. Oats averaged a record 60 bushels per acre, 17 bushels above last year and 6 bushels above the previous record of 54 bushels set in 1971 and 1977. Barley set a record yield of 43 bushels per acre. This is 9 bushels above the 1981 yield and 1 bushel above the previous record set in 1977. Rye averaged 36 bushels per acre, 8 bushels over 1981 and 1 bushel above the previous record set in 1971. Flaxseed yield tied the record of 14.5 bushels per acre set in 1969 and 1979. Wheat yields increased in all 3 classes but winter wheat increased the most. Winter wheat average yield in 1982, at 34 bushels, exceeded 1981 by 8 bushels. The durum yield of 24 bushels per acre was up 1 bushel while other spring wheat averaged 25 bushels per acre, an increase of 3 bushels over last year. The corn yield of 73 bushels per acre was 3 bushels above 1981 and just under the record yield of 74 bushels per acre set in 1979. Corn silage averaged 6.8 tons per acre, 1 ton above last year. Grain sorghum yields averaged 46 bushels per acre, 3 bushels over last year. Sorghum silage yields averaged a record 9.4 tons per acre, just over the previous record of 9.0 tons in 1963. Soybean yields averaged 31 bushels per acre, 2 bushels more than 1981. All hay yields averaged a record 1.99 tons per acre. Alfalfa hay averaged 2.4 tons per acre, which tied the record set in 1978. All other hay averaged a record high 1.45 tons per acre. Sunflower yields dropped due to dry conditions in the north central and northeast where most of the State's sunflowers are grown. Yields averaged 1,059 pounds per acre, 10 pounds below 1981.

Planted acres of the major crops totaled 16.6 million acres in 1982, just below the 16.7 million planted in 1981. All wheat seedings showed a decline of 210,000 acres, which was the largest change of any crop. Sorghum decreased 120,000 acres and corn declined 100,000 acres. Oat seedings jumped 200,000 acres, the largest increase for any crop this year. Sunflower acreage increased 175,000 acres while soybeans and flaxseed both increased 60,000 acres.

Harvested acres of major crops totaled 16.3 million acres, 3 percent above 1981. Oats led the increases with 590,000 acres more than 1981. Sunflowers were harvested on 181,000 more acres than in 1981. Other crops showing increases in harvested acres were rye, flaxseed, soybeans, and all hay.

UNITED STATES

The Nation's production of wheat, corn, barley, soybeans and hay was the largest on record in 1982. Record yields were reached for wheat, corn, oats, barley and hay.

Unusually, cool weather and untimely rains slowed land preparation and spring plantings during most of April. Drier weather throughout the Corn Belt during the last week of April allowed farmers to make up for lost time. Clear, warm weather in May allowed rapid planting in the eastern Corn Belt but rain in western Corn Belt areas kept plantings at a standstill. By the end of May corn planting was 82 percent finished whereas 90 percent is average. Improved weather in June permitted western Corn Belt farmers to finish corn planting; however, soybean plantings were still delayed by wet conditions. Cool weather slowed crop development for much of June. Warmer weather in July spurred much needed growth and development. Development of corn and soybeans was ahead of normal in the eastern Corn Belt but behind normal in western areas. Wheat harvest progressed rapidly in July after a slow start in June. Warm weather and adequate rain early in August hastened crop development, but cool temperatures later on slowed plant growth in many parts of the Corn Belt. Normal temperatures and adequate rainfall during September in the western Corn Belt caused rapid crop development. Eastern Corn Belt areas were cooler than normal and dry weather stressed crops in a few areas. Persistent wet weather in October slowed harvesting of crops in the western Corn Belt. Corn harvest in November progressed slowly due to the wetness. By the end of the month 92 percent had been harvested, slightly behind average.

Acreage of principal crops planted or produced in 1982 totaled 363 million acres, down 2 million acres from 1981. Crops showing increases in planted acres were soybeans, 6 percent; oats, 4 percent; and sorghum, 1 percent. Decreases came in corn, 3 percent; all wheat, 2 percent; and barley, 1 percent. Harvested acreage of principal crops totaled 354 million acres, down just 2 million acres from 1981.

CROP SUMMARY

COMMERCIAL FERTILIZER

Commercial fertilizer sales dropped in the fiscal year ending June 30, 1982. There were 434,129 tons (including carrier) of commercial fertilizer sold in South Dakota in fiscal year 1982, 9 percent below the record high tonnage sold in 1981. Actual nutrients (NPK) totaled 225,885 tons, down 8 percent. Low grain prices and high interest rates contributed to the decrease in fertilizer sales.

Nitrogen accounted for 67 percent of the total NPK. Phosphoric acid accounted for 26 percent and potash accounted for 7 percent.

Anhydrous ammonia (82-0-0) was the most popular fertilizer with sales of 81,323 tons.

The second most popular was 18-46-0 with 78,665 tons sold, and third in sales was ammonium nitrate with 56,453 tons sold.

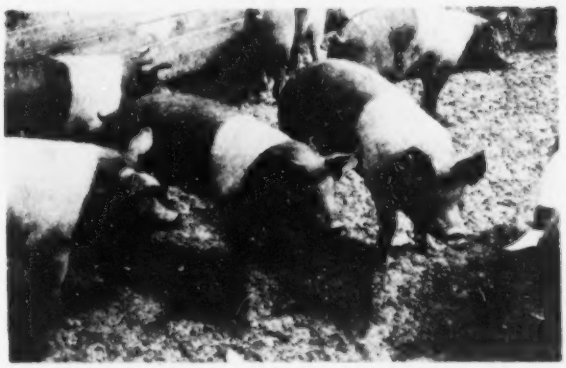
1/ Compiled by Division of Plant Industry, Department of Agriculture, Pierre, South Dakota. The sum of individual items may not equal totals due to rounding. Excludes liming materials. 2/ Weight when purchased. 3/ Actual weight of nutrients. The difference between the total consumption and total NPK are other elements and carriers. 4/ Including carriers.

LIVESTOCK AND POULTRY



SOUTH DAKOTA

LIVESTOCK AND POULTRY

South Dakota ranked thirteenth in the Nation in cash receipts from livestock and livestock products during 1981. Cash receipts in 1981 which totaled $1.9 billion, were up 1 percent from the previous year. Gross income from all cattle, hogs, sheep and poultry during 1982 was $1.4 billion, down 12% from a year earlier.

CATTLE

The January 1, 1983 inventory of all cattle at 4,060,000 head was 4 percent more than the previous January 1 count of 3,900,000 head. The 1982 calf crop of 1,780,000 head was 3 percent higher than the 1981 calf crop. Average value per head of all cattle on January 1, 1983, was $395 compared to $400 per head on January 1, 1982. Cash receipts from sales of cattle and calves in 1982 at $1.04 billion were 19 percent below last year.

HOGS

The number of hogs and pigs on farms in the State on December 1, 1982, at 1,510,000 head, was 12 percent below a year earlier. The average value of all hogs and pigs was $86.00 per head compared to $65.50 a year ago. The total value of hogs and pigs on hand December 1 was $129.9 million, up 16 percent from a year earlier. Cash receipts from marketings of hogs and pigs were $302.8 million, 5 percent above 1981. The pig crop for 1982 was 2,332,000 head, 12 percent below 1981. There was a decrease of 18 percent in the spring pig crop and a decrease of 6 percent in the fall pig crop.

SHEEP

The number of sheep on South Dakota farms and ranches on January 1, 1983, at 680,000 head, was down 9 percent from 1982. Stock sheep numbered 630,000 head, down 10 percent from 1982 and sheep on feed numbered 50,000 head, unchanged from 1982. The 1982 lamb crop, at 640,000 head, was down 7 percent from 1981. Average value per head of all sheep on January 1, 1983, was $48.00 compared to $54.50 per head on January 1, 1982. Cash receipts from sales of sheep and lambs during the year totaled $31.7 million, down 9 percent from a year earlier.

MILK PRODUCTION

South Dakota milk production in 1982 totaled 1.76 billion pounds, unchanged from 1981. There was an increase of 4,000 head in the number of milk cows, but the production per cow decreased 240 pounds in 1982. Cash receipts from marketings of milk and cream totaled $224.3 million in 1981 compared to $203.9 million in 1980.

POULTRY AND EGGS

The number of chickens on farms on December 1, 1982, was 2,050,000, a decline of 13 percent from a year earlier. Egg production in 1982 was down 7 percent from 1981 and cash receipts from eggs at $12.7 million were down $1.8 million, with the average price per dozen lower than in 1981. Cash receipts from the sale of turkeys added $14.3 million to gross income in 1982.

UNITED STATES

CATTLE

The Nation's farmers and ranchers had 115.2 million cattle and calves in their herds on January 1, 1983, down slightly from the 115.6 million on hand a year earlier. This is the first downward trend in cattle inventories in the last four years. The number of beef cows decreased 3 percent and the number of milk cows was up slightly. The value of cattle and calves on farms and ranches January 1, 1983, amounted to $46.7 billion, a decrease of 3 percent from a year ago. The average value per head decreased 2 percent from $415 on January 1, 1982 to $406. The Nation's 1982 milk production was up 2 percent from the previous year. The number of cows milked was up 1 percent and the production per cow was up 1 percent from the previous year.

HOGS

Hog and pig numbers in the Nation on December 1, 1982, were down 9 percent from a year ago. The average value per head was $89.90 compared to $70.10 on December 1, 1981. Total value of all hogs and pigs on hand December 1, 1982, was $4.8 billion, an increase of 17 percent from a year earlier. The 1982 pig crop declined 10 percent from 1981.

SHEEP

Sheep and lamb numbers decreased 8 percent from a year earlier. Stock sheep decreased 10 percent and sheep on feed increased 5 percent. The average value per head of all sheep and lambs decreased from $56.90 per head on January 1, 1982, to $51.70 per head on January 1, 1983, resulting in a total value of $615.7 million. The 1982 lamb crop, at 8.50 million head, was 4 percent less than the 1981 crop.

POULTRY

Chicken numbers on December 1, 1982, were 2 percent less than a year earlier. Layer numbers during the year averaged 286.0 million, compared with 287.7 million in 1981. Egg production in 1982 was 69.7 billion eggs, down only slightly from 1981. The number of turkeys raised in 1982 at 165 million, was 3 percent less than in 1981.

NOTE: The 1982 cash receipts data are preliminary.

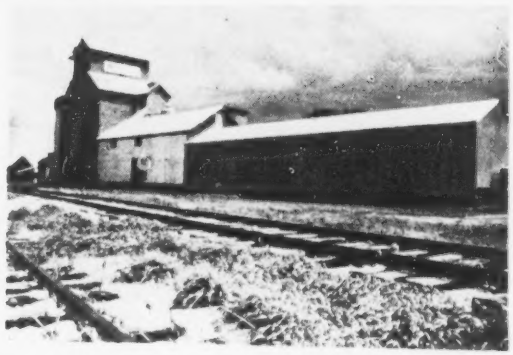
INCOME AND PRICES



SOUTH DAKOTA

INCOME

The 1982 South Dakota cash receipts from farm marketings, excluding government payments, totaled $2,894 million, a record high and an increase of 4 percent over 1981. This was the fifth year in a row cash receipts from marketings of farm products showed an increase. Of the 1982 total, $1,952 million resulted from the sales of livestock, poultry, and their related products. The sales of crops accounted for $942 million in 1982, up 2 percent from last year.

In 1931, cash receipts from marketing livestock accounted for 65 percent of the grand total, including government payments, while cash receipts for crops provided 32 percent. Cattle and calves continued as the largest cash income source in 1981 with receipts totaling $1,271 million, 44 percent of the total. Wheat was second and accounted for 11 percent of the total with $324 million. Hogs was ranked third, generating cash receipts of $287 million, 10 percent of the total.

South Dakota farmers received about $91 million in government payments in 1981, compared with $65 million a year earlier. Government payments accounted for the remaining 3 percent of the 1981 cash farm income. Payments from the Wheat Program accounted for $26 million followed by the Feed Grains Program for $18 million in 1981.

Farm production expenditures during 1981 totaled $2,614 million, up 9 percent from the $2,393 million level of 1980. The 1981 realized net farm income in the State totaled $462 million compared to $567 million in 1980.

Realized gross income per farm increased 5 percent in 1981 to $80,935. However, realized net income per farm was $12,154 in 1981, a decrease of $2,579 from 1980. Realized net income is a measure of change in the farmer's income position. Value of changes in inventory are not included in realized net income. Total net income per farm rose $4,284 from 1980 to $12,601 in 1981. Total net income includes changes in farm inventory values.

PRICES

Season average prices during 1982 for all principal crops in South Dakota were down from 1981. The season average price received for corn, at $2.05 per bushel, was down 25 cents from the 1981 price. Wheat and barley were down 14 and 58 cents, respectively, from the previous year. Sorghum for grain was down 52 cents and soybean prices slid 42 cents a bushel from a year earlier. Oats and rye decreased 54 and 55 cents, respectively. Flaxseed was down $1.48 a bushel and sunflower seeds slipped $2.28 a hundredweight. The season average price for hay dropped $25.50 from 1981 to $44.00 per ton in 1982.

The 1982 average price for meat animals was down from 1981, except for hogs and lambs. The average price for hogs in 1982 was $51.40 per hundredweight compared to $43.80 in 1981. Beef cattle prices dropped 50 cents to $58.60 per hundredweight in 1982. The lamb price averaged 30 cents higher in 1982 as compared to the previous year. Sheep in 1982 averaged $17.10 per hundredweight considerably below the average of $2[illegible].0 registered a year ago.

UNITED STATES

INCOME

The 1981 United States cash receipts from farm marketings totaled $143 billion. Of the 1981 total, 47 percent resulted from the sales of livestock, poultry, and their related products. Crop sales accounted for 52 percent with government payments covering the remaining one percent. The five leading States for farm cash receipts in 1981 were California, Iowa, Texas, Illinois, and Minnesota. South Dakota ranked twenty-first in total cash receipts, twenty-ninth in crops and thirteenth in livestock receipts. Iowa, Texas, California, Wisconsin, and Nebraska, in that order, were the five leading States in livestock receipts. California, Illinois, Iowa, Texas, and Minnesota were the top five States in crop cash receipts. The leading States for individual commodities were Texas for cattle and calves; Wisconsin for dairy; Illinois for soybeans; Iowa for corn and hogs; and Kansas for wheat.

Realized gross income per farm for the United States increased 4 percent in 1981 to $66,189. Realized net income per farm was $8,042 in 1981, compared to $10,057 in 1980. Total net income per farm rose $2,023 from 1980 to $10,312 in 1981.

PRICES

Prices received in 1982 by United State's farmers were lower for all major crops. Corn dropped 18 cents to $2.32 per bushel in 1982 and soybeans averaged $5.48 per bushel, down 56 cents from 1981. All wheat averaged $3.39 per bushel in 1982 compared to $3.65 in 1981. Barley was down 36 cents and sorghum was down 17 cents from a year earlier. Prices for oats and rye decreased 44 and 54 cents, respectively, from 1981.

The United States annual average price for beef cattle at $56.70 per hundredweight was down 3 percent from 1981. Calf prices dropped 7 percent to $59.80 in 1982. The hog price, at $52.30 per hundredweight, averaged $8.40 higher in 1982. Lambs averaged $53.10 per hundredweight compared to $54.90 in 1981.

1/ Value of production is the production of a crop multiplied by the season average price which is received for that part of the crop that is sold. Value of production cannot be taken as income since the income from that part of the crop which is fed to livestock is included in the income shown for livestock.
